

PolyPipe® Company History

PolyPipe®, Inc. was established in 1977 in Gainesville, Texas by a small group of local investors with a vision for providing polyethylene pipe for the regional oil and gas production market. Since that time, PolyPipe® has continued to grow through expansion and acquisition to its current position as a recognized industry leader in the manufacture of polyethylene piping products in North America.

Gainesville, Texas

In 1985, PolyPipe® diversified operations and began producing fabricated fittings and gas pipes for the natural gas distribution market. A facility was built in Erwin, Tennessee to service the East Coast gas utility customers. This installation also included a large diameter extrusion line capable of producing 54” diameter pipe.

Erwin, Tennessee

A manufacturing facility was constructed in 1995 in Fernley, Nevada. The addition of this plant to PolyPipe®'s portfolio gave PolyPipe® a coast-to-coast nationwide presence in the polyethylene pipe market.

Fernley, Nevada

In 1995, PolyPipe® was acquired by CSR America who was a major producer of concrete pipe and related building materials. CSR also acquired a manufacturing facility in Sandersville, Georgia. This facility was merged with the existing PolyPipe® facilities and operated as the PolyPipe® Division of CSR. In 2001 these and other North American assets were split-off from CSR and continued to operate as Rinker Materials, PolyPipe® Division.

Sandersville, Georgia

PolyPipe® was purchased in 2005 by the current owner, The Halifax Group. This change of ownership ushered in a period of growth and expansion that PolyPipe® is still enjoying.

In 2007, PolyPipe® expanded the Fernley, Nevada operation to add a state-of-the-art large diameter extrusion line. This line is capable of producing 65" diameter pipe. This capability sets PolyPipe® apart from all other polyethylene pipe manufacturers as their capabilities are limited to 63" diameter.

In 2007 PolyPipe® also built a new high-output state-of-the-art facility in Evansville, Wyoming. This facility was built to service the coal-bed methane gas production in the NorthWest United States.

Evansville, Wyoming

In 2009, PolyPipe® expanded once again with the opening of a new facility in Midland, Texas. PolyPipe® responded to the demands of the local energy market to bring regional pipe manufacture and supply to this West Texas market.

Midland, Texas
